***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claim 1, drawn to a method for determining whether a test compound modulates the drug resistance of a cell comprising administering said test compound and identifying said compound as a modulator of drug resistance, classified in class 514, subclass 1.
  - II. Claims 21-32, drawn to a method for identifying candidate compounds, which modulate the drug resistance of a cell comprising assessing the activity of Chk1 polypeptide, classified in class 436, subclass 86.
  - III. Claims 33-41, drawn to a method for screening compounds to identify compounds that increase drug resistance of a cell comprising identifying said compound in the presence and absence of chemotherapeutic drug, classified in class 436, subclass 86.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions involve different assays, assessments and yield different endpoints. For instance, the method of Group I reads on an *in vivo* assay, whereas Groups II and III are *in vitro* assays. Moreover, the *in vitro* method of Group II involves determining the activity of the Chk1 polypeptide, whereas the *in vitro* Group III does not include

Art Unit: 1643

assessing polypeptide activity. Accordingly, these Groups are not useable or searchable together.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Art Unit: 1643

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
